CLUTCH Iron FEATURES

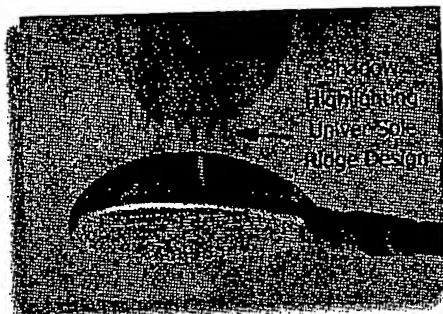

UNIVER-SOLE™

The key to success in all pressure-packed lies prevents digging. This isn't just a bounce and sole width issue.

The width of the CLUTCH iron is wide enough digging yet not as big as a fairway wood sole get it down to your ball in the rough.

The sharp edges parallel to the target line are designed for increased playability on hardpan and tight lies.

Because irons and fairway woods bounce up when striking hard surfaces, many balls are hit "thin".

The sharp edges of the "UNIVER-SOLE" delay the ricochet action a moment longer to help get the leading edge of the CLUTCH iron under the ball to avoid those hot, thin hardpan shots.
